PROFILE

Developer with two years building systems in Laravel and online stores in Magento 2. At Converse México I move between backend modules, React components for the PWA and load tests; before that I was the only systems engineer at QACi.

EXPERIENCE

Magento Developer · Converse México

May 2026 – Present

Adobe Commerce 2.4.8 Cloud · PWA Studio (React, GraphQL) · Fastly · MySQL

I joined as a backend developer and now work across the whole online store: 19 modules of my own and changes to more than 30 existing ones.

- Built native Magento modules for operations and marketing: pre-sale campaigns that open and close on their own, customer cleanup, bulk order status updates from CSV, configurable free shipping and a welcome popup.
- Automated the migration of more than 350,000 customers, with their full history, from the old platform to the new one without losing a single record.
- Built PWA features end to end, from the GraphQL module to the React component: PayPal installments, real stock limits in the cart and newsletter opt-out from My Account, with about 80 new Jest tests.
- Rebuilt the Fastly cache after an outage with 502 errors: the cache hit ratio reached 98.4% with no 5xx errors, and category pages dropped from 636 ms to 93 ms.
- Built a Botpress support assistant that looks up orders in Magento and hands off to a human agent in LiveChat, with no per-call AI cost; AI will be added only for specific cases.
- Fixed an infinite loading screen caused by the CSP and third-party scripts, with Cypress tests to reproduce each failure.

Systems Engineer · QACi

Jun 2024 – Feb 2026

Laravel 12 · PHP 8 · MySQL · Blade · Bootstrap · Power BI · qaci.org

- Migrated the legacy plain-PHP certificate system to Laravel 12. Certificates already issued still validate because the search checks both the old and the new database.
- Automated certificates and letters that used to be filled in by hand: they now come out in Spanish and English on 17 official templates (five ISO standards), with a QR code for public verification.
- Built the full certificate lifecycle: draft, released, visible or hidden, renewal, expired and cancelled.
- Built Power BI dashboards comparing each company before and after certification.

PROJECTS

More details in my portfolio: mjnexus.com.mx/portafolio/miguelmeza

MJ Nexus · personal project

2023 – Present

- Built a Laravel 13 platform with a training app for clients and coaches (PWA), the Blisse MX online store and the agency website with local SEO; the app has about 50 active users two months after launch. mjnexus.com.mx

Dragon Gym · team of 3, in use

2025

- A team of 3 built a gym management system in PHP and MySQL and a Flutter app for members; my part was inventory, the point of sale and bank-transfer payments in the app.

SKILLS

Backend: PHP 8, Laravel 12 & 13, Node.js, REST APIs, GraphQL, MVC, OAuth

E-commerce & CMS: Magento 2 / Adobe Commerce, PWA Studio, Fastly, WordPress

Frontend: JavaScript, TypeScript, React, Preact, Blade, jQuery (AJAX, DOM), HTML5, CSS3, Tailwind CSS, Bootstrap, PWA

Mobile: Flutter / Dart, Kotlin, Firebase

Databases: MySQL, MariaDB, PostgreSQL, Oracle, SQL Server

Testing: PHPUnit, Jest, React Testing Library, Cypress, k6, Postman

DevOps: Docker, Nginx, Linux, AWS, virtual machines, Redis, OpenSearch, RabbitMQ, Git / GitHub / GitLab CI, Composer

Data analysis: Power BI, data analysis, process automation

Chatbots: Botpress, LiveChat

Methodologies: Scrum, Agile

Certifications: [Cybersecurity](#) (Google) · [Data Analytics](#) (Google) · [Cyber Threat Management](#) (Cisco)

Education: B.S. in Computer Systems Engineering · Instituto Tecnológico Superior de San Martín Texmelucan · 2021 – 2025

Languages: Spanish (native) · English (intermediate, B1)
